## Response to Amendment

1. Applicant's amendment filed 03/08/2004 has been entered and carefully considered.

Claims 2, 5, and 6 have been amended.

Claims 1 and 7-9 have been cancelled.

#### Reasons for Allowance

- 2. Claims 2-6 are allowed.
- 3. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 2, none of the prior art of record teaches or suggests the combination of an input data generating method generating data input to an electromagnetic field intensity calculating device which calculates an intensity of an electromagnetic field emitted from an electric circuit device having a metal cabinet, wherein the method comprising step of: extracting data of a same surface composed of a plurality of surfaces existing on a front or a back of a metal plate which configures the metal cabinet from a plurality of pieces of three-dimensional surface data, if the surface data is composed of the plurality of pieces of three-dimensional surface data including the front and the back of the metal plate; partitioning each of the plurality of surfaces configuring the same surface into quadrilateral meshes; and outputting data partitioned into meshes to the electromagnetic field intensity calculating device. It is these limitations as they are claimed in the combination, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Art Unit: 2863

Regarding claim 5, none of the prior art of record teaches or suggests the combination of an input data generating method generating data input to an electromagnetic field intensity calculating device which calculates an intensity of an electromagnetic field emitted from an electric circuit device having a metal cabinet, wherein the method comprising step of: extracting surface data of the metal cabinet from three-dimensional data of the electric circuit device; partitioning each of a plurality of surfaces into quadrilateral meshes, if the surface data of the metal cabinet is data corresponding to the plurality of surfaces; making a comparison between coordinates of partitioning points on two sides which can possibly be a side shared by contiguous surfaces among the plurality of surfaces; recognizing data of the partitioning points to be data shared by the contiguous surfaces, if the coordinates of the partitioning points are determined to match within a preset tolerance; and outputting data partitioned into meshes, which include the shared data, to the electromagnetic field intensity calculating device. It is these limitations as they are claimed in the combination, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Regarding claim 6, none of the prior art of record teaches or suggests the combination of an input data generating method generating data input to an electromagnetic field intensity calculating device which calculates an intensity of an electromagnetic field emitted from an electric circuit device having a metal cabinet, wherein the method comprising step of: extracting surface data of the metal cabinet from three-dimensional data of the electric circuit device; partitioning a surface

corresponding to the surface data into quadrilateral meshes; repartitioning the quadrilateral meshes by aligning the surface corresponding to the surface data of the metal cabinet with a shape of a surface whose material is different from the metal cabinet, and which is superposed on the corresponding surface and has an area smaller than the corresponding surface, exists, after the corresponding surface is partitioned into the quadrilateral meshes; and outputting data which is partitioned into meshes and further repartitioned to the electromagnetic field intensity calculating device. It is these limitations as they are claimed in the combination, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
